PANEL & AUDIENCE DISCUSSION

- This session focused on how HUB participation and involvement in Construction Management at Risk (CM-at-Risk) projects has evolved over the years. From the inception or introduction of the CMaR delivery method, in early 2001, to now 2012, what impact has this had on HUB firms in terms of their growth capacity, business development and sustainability.
- Doing this lull period in construction, what should CMs, GCs, HUB firms, Resource Providers do to ramp-up and start preparing for when the Construction Industry starts booming again.
